Sometimes, we require just method declaration in super-classes. This can be achieved by specifying the abstract type modifier. These methods are sometimes referred to as subclasser responsibility because they have no implementation specified in the super-class. Thus, a subclass must override them to provide method definition. To declare an abstract method, use this general form:

Abstract class in java with abstract methods and examples. An abstract class can have abstract and non-abstract (concrete) methods and can't be instantiated with inheritance, polymorphism, abstraction, encapsulation, exception handling, multithreading, IO Streams, Networking, String, Regex, Collection, JDBC etc.

### **Abstract Class in Java - Javatpoint**

abstract keyword is used to declare the method as abstract. You have to place the abstract keyword before the method name in the method declaration. An abstract method contains a method signature, but no method body. Instead of curly braces, an abstract method will have a semicolon (;) at the end. Following is an example of the abstract ...

### **Java - Abstraction - Tutorialspoint**

2. If a class has an abstract method it should be declared abstract, the vice versa is not true, which means an abstract class doesn't need to have an abstract method compulsory. 3. If a regular class extends an abstract class, then the class must have to implement all the abstract methods of abstract parent class or it has to be declared ...

### **Abstract method in Java with examples - BeginnersBook**

Further to the answer from @Will (which is correct), you could structure your heirarchy a little better. For example, you do something different with each of the media types, but each type still gets consumed.. So change your base class to have an abstract base method called Consume(), which is then overridden and actually implemented in each derived class, this way you can pass around ...
