@gogobers, a couple of Makefiles needed to be updated to have your tutorial properly included with the other Qucs docs; I'll push the needed changes later. Out of curiosity, why did you use `w2dbm()` to obtain the noise factor in dB and not just `dB()` as done for the S-parameters? Of course the numerical results is the same, but since also the noise factor is a pure number it makes sense to use ...

Since the model used in SPICE and in QUCS rely on a gummel-poon modelisation, and since the level of modelisation is the same, some quite direct conversion could be used to create the library for QUCS. To use directly this le, you will need to store the le in an other directory from the project one ( a small bug taken into account ).
