The endocrine system is made up of a complex network of glands, which are organs that secrete substances.. The glands of the endocrine system are where hormones are produced, stored, and released.

The Endocrine System: Function, Organs, Hormones,

Acces PDF Endocrine System And Selected **and ...**

The endocrine system affects nearly every cell and organ in the body. It is made up of glands that release chemicals to control many bodily functions, including cell growth and development, mood, sexual functions, and metabolism, the process of converting fuel from foods into energy for the body to function.

comprising feedback loops of the hormones released by internal glands of an organism directly into the circulatory system, regulating distant target organs. In

humans, the major endocrine glands are the thyroid gland and the adrenal glands. In vertebrates, the hypothalamus is the neural control center for all endocrine systems.
