Fault Tolerant Flight Control And

- the flight control and guidance system should be reconfigurable depending on actuator fault occurrence or aircraft damage, and should be able to avoid obstacles. Fault-tolerant Flight Control and Guidance Systems addresses all of these aspects with a practical approach following three main requirements: being applicable in real-time; highly computationally efficient; and modular.

An adaptive fault-tolerant control law based on parameter estimation is designed to achieve active fault tolerance in case of horizontal stabilizer damage. The simulation and experimental results indicate that the proposed model and adaptive fault-tolerant controller provide preferable performance when the horizontal stabilizer is damaged.

Fault Tolerant Control Algorithm of Hexarotor UAV. As the best representative of the current cutting-edge technology, unmanned aerial vehicle (UAV) is widely used in various fields such as electric power inspection, agriculture, forestry and plant protection, fire rescue, and film and television shooting. With the rapid development of UAV, the safety work of UAV has become more important.

This example deals with fault-tolerant flight control of passenger jet undergoing outages in the elevator and aileron actuators. The flight control system must maintain stability and meet performance and comfort requirements in both nominal operation and degraded conditions where some actuators are no longer effective due to control surface impairment.

Fault-Tolerant Control of a Passenger Jet - MATLAB ...

Fault-tolerant ight control systems are often complemented by a robust guidance system to achieve safe landing objective. For example, Menon et al. implemented a robust guidance algorithm for impaired aircraft based on a point mass nonlinear aircraft model. The guidance algorithm was formulated with the nite interval differential game.

Nonlinear Fault-Tolerant Guidance and Control for Damaged ...

Abstract: Design of fault tolerant systems is a popular subject in flight control system design. In particular, adaptive control approach has been successful in recovering aircraft in a wide variety of different actuator/sensor failure scenarios.

For such systems, Fault Tolerant Control Systems (FTCS) need to be developed. Active FTCS are dependent on a Fault Detection and Identification (FDI) process to monitor system performance and to detect and isolate faults in the systems. The main objective of this book is to study and to validate some important issues in real-time Active FTCS by ...
