**Central nervous system - Wikipedia**

Central Nervous System: The central nervous system is the part of the nervous system in vertebrates, which comprises the brain and spinal cord, to which the sensory impulses are carried out and processed in order to coordinate functions in the body by sending the motor

impulses to the  
effector organs.

# Online Library Kuhlenbeck The Central Nervous **System**

Overview. The central nervous system can be thought of as the coordination and integration system within organisms. The CNS takes signals from the peripheral nervous system, processes them, then creates new signals to coordinate actions of different body systems. For instance, long-term and short-term metabolism and
