Linear maps are mappings between vector spaces that preserve the vector-space structure. Given two vector spaces  $V$  and  $W$  over a field  $F$ , a linear map (also called, in some contexts, linear transformation or linear mapping) is a map:  $\rightarrow$  that is compatible with addition and scalar multiplication, that is  $(u+v) = u + v$ ,  $(au) = a(u)$  for any vectors  $u,v$  in  $V$  and scalar  $a$  in  $F$ .

### **Linear algebra - Wikipedia**

He wrote a very basic linear algebra text book for beginners and yet made his explanations so unclear that the book ends up being hard to read. The topics are the very basics of linear algebra: no canonical forms, no infinite dimensional spaces, the underlying field is always  $\mathbb{R}$  or  $\mathbb{C}$ , and everything is done in terms of matrices.
