### Parallel and Concurrent Programming in Haskell [Book]

Terminology: Parallelism and Concurrency In many fields, the words parallel and concurrent are synonyms; not so in programming, where they are used to describe fundamentally different concepts. A parallel program is one that uses a multiplicity of computational hardware (e.g., several processor cores) to perform a computation more quickly.

Properties of dataflow programming languages. Traditionally, a program is modelled as a series of operations happening in a specific order; this may be referred to as sequential, p.3 procedural, control flow (indicating that the program chooses a specific path), or imperative programming. The program focuses on commands, in line with the von Neumann: p.3 vision of sequential programming, where ...
