The Half Life of Facts

" The Half-Life of Facts is easily one of the best books of the year on science." --Stephen L. Carter, New York Times bestselling author " [The Half-Life of Facts] does what popular science should do -- both engages and entertains."

The Half-Life of Facts: Why Everything We Know Has an ...

Half-life is the expected value when half the number of atoms have decayed. Carbon-14 has a half-life of 5730 years. Taking one atom of C-14, this will either have decayed after 5730 years, or it will not. But if this experiment is repeated again and again, it will be seen that the atom decays within the half life 50% of the time.

Half-life (element) Facts for Kids

In biology, a half-life is the time taken for a substance to lose half its effects. The most obvious instance is drugs; the half-life is the time it takes for their effect to halve, or for half of the substance to leave the body.

Half Life: The Decay of Knowledge and What to Do About It

The half-life of knowledge or half-life of facts is the amount of time that has to elapse before half of the knowledge or facts in a particular area is superseded or shown to be untrue. These coined terms belong to the field of quantitative analysis of science known as scientometrics.

Half-life of knowledge - Wikipedia

This number — 704 million years — is a measurable amount of time, and it is known as the half-life of uranium. It turns out that facts, when viewed as a large body of knowledge, are just as predictable. Facts, in the aggregate, have half-lives: We can measure the amount of time for half of a subject's knowledge to be overturned.

The Half-life of Facts - Farnam Street

Half-life, in radioactivity, the interval of time required for one-half of the atomic nuclei of a radioactive sample to decay (change spontaneously into other nuclear species by emitting particles and energy), or, equivalently, the time interval required for the number of disintegrations per second of a radioactive material to decrease by one-half.
