work, such as moving money from one bank account to another, that must leave the bank's database in a consistent state whether or not the transaction succeeds: either the money moves, or it stays in the original account. Gray developed techniques that allowed concurrent execution of many transactions, as well as restart after crashes, while maintaining the consistency of the database.

Jim Gray - A.M. Turing Award Laureate

The transaction is a set of logically related operation. It contains a group of tasks. A transaction is an action or series of actions. It is performed by a single user to perform operations for accessing the contents of the database.
