Unraveling Dna The Most Important

It would appear that each research team in the field of unraveling DNA speaks its own language. What makes the comparison with the tower of Babel more apt is that DNAology sounds like another secular religion. Many of the body's ills previously attributed to God are now being attributed to

synthesis in a one-to-one correspondence between genes and proteins, is highly questionable. If the relationship between DNA and its cellular consequences is not as simple as genetic engineers claim (due to "alternative splicing"), then the result of modifying the genome of plants, animals, or humans is not predictable.

The unique structure of chromosomes keeps DNA tightly wrapped around spool-like proteins, called histones. Without such packaging, DNA molecules would be too long to fit inside cells. For example, if all of the DNA molecules in a single human cell were unwound from their histones and placed end-to-end, they would stretch 6 feet.

DNA Unraveling

Climbing the helix staircase of DNA the author attempts a survey of everything new in the field up to 1996. His effort to speak to the layman is rather uneven-half the book is strictly for PHd candidates in microbiology. It would appear that each research team in the field of unraveling DNA speaks its own language.
