Introduction: This document describes  
details on how NAT-T works.

Background: ESP encrypts all critical  
information, encapsulating the entire  
inner TCP/UDP datagram within an ESP  
header. ESP is an IP protocol in the same  
sense that TCP and UDP are IP protocols

Automatic NAT traversal is the default method used to establish a secure IPsec tunnel between Cisco Meraki VPN peers. This method relies on the Cloud to broker connections between remote peers automatically. It is the preferred method because it works well even when peers are located on different private networks protected by a firewall
